

GenPDFPrincePlugin

This plugin generates PDF using the third-party tool [Prince XML](#). You will have to download it from their site and agree to the [license terms](#). Note that the non-commercial version can be used on a Foswiki server for free. In this case you will get a water mark at the top right corner of the pdf although not visible when printed out.

Please contact [MD Consulting](#) to purchase a server license with a Foswiki sales discount to get rid of this water mark and be able to use Prince XML for commercial purposes.

Usage

Get a PDF by adding `contentType=application/pdf` to the view url like this:

```
%SCRIPTURL{"view"}/%WEB%/%TOPIC?contentType=application/pdf
```

Here's the complete Foswiki documentation in [PDF](#).

Installation

You will have to download Prince XML from <http://www.princexml.com/download>.

If you are using other plugins that implement a `completePageHandler` (see [InstalledPlugins](#)) then you most probably need to tune the `$Foswiki::cfg{PluginsOrder}` to list the [GenPDFPrincePlugin](#) behind those. For example, if you are using [Foswiki:Extensions/ZonePlugin](#) then you will have to list both giving them a specific order how they execute the `completePageHandler`

```
$Foswiki::cfg{PluginsOrder} = '...., ZonePlugin, GenPDFPrincePlugin';
```

Note, that ZonePlugin is not required anymore in newer Foswiki engines > 1.1.0.
